Perth Fertility Specialists

Information regarding our referral forms is available on Best Practice, Medical Director and HealthShare.

Monthly chance of natural conception

Maternal age and prevalence of aneuploidy

Guidelines for initial infertility investigations

Initial infertility investigations should start if the female patient is under 35 and trying to conceive for 12 months OR over 35 and trying to conceive for 6 months. To expedite the referral process, we request that these investigations are initiated prior to referral to one of our fertility specialists.

Female investigations

Preconception screen:

- BMI (incl. height + weight)
- blood group and antibodies
- FBC + iron studies (and Thalassemia screen as indicated)
- Rubella, Varicella, Syphilis, Hepatitis B/C and HIV serology
- TSH (aim for < 2.5)
- Vitamin D, Prolactin, Free Androgen Index (FAI)
- Karyotype

Fertility Hormones:

- FSH, LH, Oestradiol (all day 2-6), AMH
- Luteal progesterone

Ultrasound:

- Pelvic ultrasound and request Antral Follicle Count

Male investigations

Preconception screen:

- Hepatitis B/C and HIV serology
- Syphilis

Fertility Hormones:

- LH, FSH, Testosterone, SHBG

Karyotype

Semen analysis:

Element	Reference
Volume	≥ 1.5mL
Concentration	≥ 15 million/mL
Progressive mobility	≥ 32%
Normal morphology	≥ 4%
Antisperm antibodies	> 50%
